APPENDIX.

ANNALS OF OPHTHALMOLOGY AND OTOTOLOGY.

TO OUR READERS.

The ANNALS is divided into the following special departments: (1) Annals of Ophthalmology; (2) Annals of Otology; (3) Annals of Laryngology and Rhinology. A fourth division, under the care of Dr. Wendell Reber, will deal with Neurology in so far as it pertains to the subjects included in the other departments. Each department will contain original communications and abstracts of original articles appearing in current medical literature of all countries.

The contents of each department will be classified and indexed. Abstracts will be sufficiently full and complete to enable readers to acquire as thorough an understanding of the subjects as could be obtained by reading the originals. All translations and abstracts will be made by men especially qualified for the work.

The change in dates of publication to the last of January, April, July and October gives time for the latest foreign journals to reach the editorial staff and enables the ANNALS to present all advances up to date. If an issue of the ANNALS be delayed five or ten days subscribers may know that it is for the purpose of including more recent and valuable contributions.

The ANNALS will not be limited in size, but each number will be a handsome book, bound in highly finished linen paper cover.

The following list contains the names of the principal periodicals made use of by each editor in the preparation of abstracts and notices for the current volume of the ANNALS:

DR. CASEY A. WOOD.

Archivio italiano di oftalmiatria (Naples).
